

BANK CUSTOMER CHURN ANALYSIS REPORT

1. Project Objective

The objective of this project is to analyse customer churn patterns in the banking sector and identify factors influencing customer retention. The dashboard helps understand customer behaviour, churn rates, customer activity, and account balances to support data-driven business decisions.

2. Dataset Description

The dataset contains information about bank customers, including customer demographics, credit scores, account balances, product usage, activity status, and churn information. It is used to analyse customer retention and identify trends related to customer attrition.

3. Tools Used

- Power BI Desktop
- Microsoft Excel

4. Dax Measures

- Total Customers =

COUNT (customer_ churn [customer_ id])

- Churned Customers =

CALCULATE (COUNT (customer_ churn [customer_ id]),
customer_ churn[churn] =1)

- Churn Rate % =

DIVIDE ([Churned Customers], [Total Customers], 0) * 100

- Average Balance =

AVERAGE (customer_ churn[balance])

- Active Customers =

CALCULATE (COUNT (customer_ churn [customer_ id]),
customer_ churn [active_ member] = 1)

5. Key Metrics

- Total Customers: 10,000
- Active Customers: 5,151
- Churned Customers: 2,037
- Customer Churn Rate: 20.37%
- Average Customer Balance: 76,490

6. Key Insights

- France has the highest number of customers among all countries.
- Germany has the highest average customer balance.
- Approximately 20% of customers have churned from the bank.
- Active and inactive customers are distributed almost equally.
- Customer churn varies across different countries and genders.

7. Dashboard Screenshot

7. Conclusion

The Bank Customer Churn Analysis Dashboard provides insights into customer behaviour, churn patterns, and account activity. The dashboard helps identify key factors affecting customer retention and supports data-driven decision-making.
